COMPANY PROFILE · 2026

DHAKA, BANGLADESH

ECO FIBER BD

Transforming Waste into **Sustainable** Solutions

EcoFiber BD manufactures, grades and exports natural banana fiber – and hand-crafts banana-fiber goods – from Bangladesh to the world.

Supplier · Exporter

www.ecofiberbd.com · info@ecofiberbd.com

01 COMPANY OVERVIEW

Who We Are

EcoFiber BD manufactures, supplies and exports raw banana fiber, recovered from the pseudostems left behind by Bangladesh's banana harvest. Beyond raw graded fiber, we craft our own range of banana-fiber handicrafts, turning what was once discarded plant material into export-ready material and finished goods for buyers across the globe.

Mission	*To turn overlooked plant waste into valuable, biodegradable fiber and finished goods – and grow into a trusted manufacturer of sustainable fiber products.*
Vision	*A future where natural fiber from agricultural waste replaces synthetic materials across textiles, paper, cordage and home goods.*
Why Now	Global industries are moving from synthetic, petroleum-based materials toward biodegradable goods – meeting that demand without competing for new land, water or agrochemical resources.

02 BUSINESS SNAPSHOT

Company at a Glance

Company Name	EcoFiber BD
Business Type	Manufacturer, supplier & exporter of raw banana fiber and banana-fiber handicrafts
Core Products	Banana stem fiber (Grades A / B / C) and banana-fiber handicraft goods
Country of Origin	Bangladesh
Port of Loading	Chattogram (Chittagong) Port
Year Established	2025
Registered Office	Level 7, House 10 (Icon Heights), Road 8, Block J, Baridhara, Dhaka 1212, Bangladesh
Contact	info@ecofiberbd.com +880 1672 268121 www.ecofiberbd.com

Hand-sorting dried fiber before grading.

03 HOW IT'S MADE

Our Process

From agricultural waste to export-ready fiber, our process follows a consistent path from pseudostem to baled fiber.

01

Cultivation & Collection

Banana pseudostems are collected after harvest, once the plant has fruited and the stem is felled.

02

Peeling & Splitting

Harvested pseudostems are peeled into sheaths and split into fine strips, ready for extraction.

03

Extraction

Fiber is separated from plant material through retting and manual or mechanical decortication.

04

Washing

Extracted fiber is thoroughly washed to remove sap, pulp and remaining impurities.

05

Drying

Washed fiber is air-dried under controlled conditions to reach export moisture levels.

06

Grading

Dried fiber is sorted into grades A, B and C based on length, strength and cleanliness.

07

Combing

Graded fiber is combed to align strands and remove short, tangled fiber before bundling.

08

Bundling & Packaging

Combed fiber is bundled, baled and packed for shipment via Chittagong Port.

0 4 OUR FIBER PORTFOLIO

Raw Banana Fiber Grades

Sourced from banana pseudostems (*Musa spp.*), a by-product of banana cultivation. Grade-specific specifications are confirmed per batch on the product Technical Data Sheet and Certificate of Analysis.

Grades A, B and C – side by side for comparison.

GRADE	DESCRIPTION	BEST FOR
A	Premium long-staple, silk-like fiber	Textile · Fashion · Paper
B	Balanced mid-grade fiber	Handicrafts · Furnishings
C	Coarse, higher-tensile fiber	Industrial · Marine

All three grades are supplied in the same fiber lengths – standard 36 in (91 cm), with lengths up to 60 in (152 cm) available. Grading is by fineness, strength and cleanliness, not length. Grade A: fine, silk-like fiber for "banana silk" textiles and premium paper. Grade B: woven handicrafts and industrial blends. Grade C: coarser strand for rope-making, marine use and biocomposite reinforcement.

Banana Fiber Technical Data

Reference values for natural banana pseudo-stem fiber (Musa spp.), per Technical Data Sheet EFBD-TDS-BF-001.

PHYSICAL PROPERTIES

Fiber diameter	80 – 250 µm
Fiber length	Standard 36 in (91 cm); up to 60 in (152 cm)
Linear density	6.8 – 66.3 tex
Density	1.2 – 1.35 g/cm³
Moisture content	10 – 13%
Colour	Off-white to yellowish-brown
Luster	Silky sheen

MECHANICAL PROPERTIES

Tensile strength	500 – 900 MPa
Young's modulus	8 – 32 GPa
Elongation at break	1.0 – 3.5%

CHEMICAL COMPOSITION

Cellulose	60 – 65%
Hemicellulose	18 – 19%
Lignin	5 – 10%
Pectin	3 – 5%
Ash content	1 – 5%
Wax content	< 1%

AVAILABLE FORMS

- Raw fiber strands, undyed – handicraft, cordage and rope
- Combed fiber – spinning and blended-yarn textile use
- Chopped / short fiber, custom cut length – paper pulp and composites
- Tow, bundle, coil or baled form – bulk export

STORAGE & HANDLING

- Store cool and dry, away from direct moisture and sunlight
- Keep bales on pallets, off the ground, to prevent moisture uptake
- Avoid prolonged high humidity – natural fiber is prone to mold

Values shown are typical reference properties for banana pseudo-stem fiber, compiled from published textile-fiber research. They represent expected ranges for this fiber type, not batch-specific lab results. Batch-specific Certificates of Analysis can be issued once a shipment or sample lot has been tested.

Where Our Fiber Is Used

Banana fiber is supplied in three grades across the applications below. Grade A suits the finest work, Grade C the most demanding structural use.

SECTOR	TYPICAL APPLICATIONS
Textiles & Apparel	"Banana silk" fabrics, sarees, blended garments and yarns
Home Furnishings	Curtains, table mats, cushion covers, upholstery and carpets
Paper & Pulp	Specialty eco-friendly paper, archival and currency paper, tea bags
Cordage	Rope, twine and marine cordage
Composites	Natural fiber-reinforced panels, automotive and moulded parts
Handicrafts	Baskets, bags, hats, mats and decorative accents

Application suitability depends on fiber grade and batch-specific properties – confirm fit for your use case with a sample request.

0 7 FROM FIBER TO FINISHED GOODS

Banana Fiber Handicrafts

Alongside raw graded fiber, we hand-craft our own range of goods from banana fiber – turning agricultural waste into finished, export-ready products. Current and in-development categories include:

01 **Baskets & Storage**

Woven banana-fiber baskets, trays and storage baskets for home & retail.

02 **Bags & Totes**

Natural-fiber bags, totes and pouches for fashion and lifestyle buyers.

03 **Mats & Rugs**

Woven placemats, floor mats and table runners in natural fiber tones.

04 **Home Décor**

Wall hangings, decorative accents and furniture trim in woven banana fiber.

05 **Custom Orders**

Bespoke handicraft development to buyer specification and branding.

Product photography of finished handicraft goods available on request.

0 8 OUR ADVANTAGE

Why Choose EcoFiber BD

Nationwide Sourcing

Over 100 fiber entrepreneurs across Bangladesh, supplying up to 40 tons a month.

Zero-Waste Sourcing

Material otherwise discarded or cleared becomes premium raw fiber.

Graded Supply

Multiple grades to match your specific application and budget.

Sustainable by Nature

Renewable, fully biodegradable fiber made from agricultural waste.

Direct From Origin

Manufactured, sourced and exported directly from Bangladesh.

In-House Manufacturing

From raw fiber supply to our own banana-fiber handicraft product line.

"Banana fiber is a by-product of an existing agricultural cycle – requiring no additional land, water or agrochemical input. Every harvest fells a pseudostem; we turn it into fiber instead of waste."

0 9 BUYER ASSURANCE

Quality & Export Readiness

Fiber is sorted into grades on fineness, strength and cleanliness, then packed for export via Chattogram Port. Batch-specific Certificates of Analysis are issued once a lot has been tested, in-house or by a third-party lab (SGS, Intertek, Bureau Veritas).
